                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
              The invention relates to novel isolated nucleic acids encoding diacylglycerol acyltransferases (diacylglycerol O-acyltransferases, DGAT, EC 2.3.1.20) and phospholipid:diacylglycerol acyltransferases (PDAT, EC 2.3.1.158) and the encoded polypeptides. The nucleic acids and methods of the invention may be useful for increasing triacylglycerol (TAG) content in transformed host cells, especially in oleaginous yeasts. The triacylglycerol produced preferably comprises long-chain omega-3/omega-6 polyumanturated fatty acids (PUFAs). The methods allow production of PUFAs with improved nutritional qualities which may be utilized as dietary supplements, particularly for infant formulas, patients undergoing intravenous feeding or for preventing or treating malnutrition, inflammation or high cholesterol. The purified PUFAs may also be incorporated into cooking oils, fate, margarines or other food as a content of the purified purpose that the content of the purified purpose the purpose that the content of the purified purpose the purpose that the purpose the purpose the purpose that the purpose the purpose the purpose the purpose that the purpose the purpose the purpose the purpose that the purpose the purpose the purpose the purpose the purpose the purpose that the purpose the

There are a variety of commercial sources of PUFAs from natural sources. However, there are disadvantages associated with these methods of production ego heterogeneous oil compositions, pollution, availability fluctuation due to the weather and expense. The current sequence is that of the Yarrowia lipolytica phospholipid:diacylglycerol acyltransferase (PDAT) DNA of the

CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acid thioesters such as triacylglycerols, diacylglycerols, waxesters, CC monoacylglycerols, phospholipids, glycolipids, lysolipids, waxesters, CC acylated carbohydrates and acylated amino acids. Also described: (1) a CC nucleotide sequence molecule (II) comprising at least one promoter region CC which functions in a host, where the promoter region is operably linked to at least one non-CC translated region which functions in a host; (2) a vector comprising (II) (2); (3) a host cell comprising (II) or the vector; (4) producing an CC improved active membrane independent acyltransferase polypeptide, CC comprising providing the above host cell and a growth medium preparing a host cell culture, culturing the host cell culture and harvesting the cacyltransferase polypeptide; (5) a polypeptide obtained by the method in (4), where the polypeptide at least is an improved active membrane independent acyltransferase polypeptide; (6) an oligonucleotide specifically hybridiaing to (I) under stringent conditions; and (7) a kit comprising the above polypeptide are useful in producing structured comprising the above polypeptide are useful in producing structured comprising lipids present in animal and plant raw material. The present condifying lipids present in animal and plant raw material. The present or condifically such active membrane in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nucleotide sequence encoding an acyltransferase polypeptide comprising least one membrane-spanning region. (I) encodes an improved active membrane independent acyltransferase polypeptide in which at least one amino acid residue of the membrane-spanning region has been deleted and/or substituted as compared to the original acyltransferase polypeptide, where the encoded active membrane independent acyltransferase polypeptide, where the encoded active membrane independent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleotide sequence encoding an improved acyltransferase poluseful for producing structured lipids or fat-soluble molecules, removing undesirable fat or in modifying lipids in animal or pla material.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      29-MAY-2002; 2002US-0383889P

Also described: (1) a comprising at least one promoter region cC which functions in a host, where the promoter region is operably linked to at least one (I), which is operably linked to at least one non-cC translated region which functions in a host; (2) a vector comprising (II) cc improved active membrane independent acyltransferase polypeptide, (2) a vector comprising the comprising providing the above host cell and a growth medium preparing a host cell culture, culturing the host cell and a growth medium preparing a host cell culture and recovering the improved active membrane independent cc independent acyltransferase polypeptide; (5) a polypeptide obtained by the method in (4), where the polypeptide at least is an improved active membrane cc independent acyltransferase polypeptide; (6) an oligonucleotide specifically hybridising to (I) under stringent conditions; and (7) a kit comprising the above polypeptide and a stabiliser. The nucleic acid comprising lipids present in animal and plant raw material. The present cc sequence is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                       The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism and result in an altered, preferably increased oil content of this cell or organism. The present sequence encodes yeast (Saccharomyces cerevisiae) PDAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Phospholipid:diacylglycerol acyltransferase enzymes in the biosynthetic pathway for triacylglycerol production and DNAs encoding them, useful for producing triacylglycerol, or for transforming any cell or organism to increase oil content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-APR-1999;

The present invention describes an enzyme for catalysing (in an acyl-CoA-independent reaction) the transfer of fatty acids from phospholipids to diacylglycerol in the biosynthetic pathway for the production of triacylglycerol (TAG). The enzyme is designated as phospholipid:diacylglycerol acyltransferase (PDAT). The enzyme and the nucleotides encoding them are useful for producing TAG and/or TAG with uncommon fatty acids. The enzyme and the nucleotide are also useful for transforming any cell or organism in order to be expressed in this cell or organism. The present sequence represents the yeast (Saccharomyces cerevisiae) PDAT ORF (open reading frame) nucleotide
                                                                                                                                                                                                                                                                              Phospholipid:diacylglycerol acyltransferase enzymes in the biosynthetic pathway for triacylglycerol production and DNAs encoding them, useful for producing triacylglycerol, or for transforming any cell or organism to increase oil content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-APR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                      CC nucleotide sequence encoding an acyltransferase polypeptide comprising at CC membrane independent acyltransferase polypeptide in which at least one membrane independent acyltransferase polypeptide in which at least one CC amino acid residue of the membrane-spanning region has been deleted CC and/or substituted as compared to the original acyltransferase colypeptide, where the encoded active membrane independent CC acyltransferase polypeptide can produce fatty acid esters and/or fatty CC acid thioesters such as triacylglycerols, diacylglycerols, waxesters, CC acylated carebohydrates and acylated amino acids. Also described: (1) a nucleotide sequence molecule (II) comprising at least one promoter region cC which functions in a host, where the promoter region is operably linked to at least one (I), which is operably linked to at least one (I), which is operably linked to at least one (I); which is operably linked to at least one (I); which is operably linked to at least one (I); which is operably linked to at least one (I); which is operably linked to at least one non-cC translated region which functions in a host; (2) a vector comprising (II); (3) a host cell comprising (II) or the vector; (4) producing an CC improved active embrane independent acyltransferase polypeptide, (5) a polypeptide obtained by the method in colorate the polypeptide; (5) a polypeptide obtained by the method in condens acyltransferase polypeptide at least is an improved active membrane independent independent acyltransferase polypeptide at least is an improved active membrane.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleotide sequence encoding an improved acyltransferase polypeptide, useful for producing structured lipids or fat-soluble molecules, in removing undesirable fat or in modifying lipids in animal or plant raw material.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        active membrane independent acyltransferase; fatty acid ester; fatty acid thioester; triacylglycerol; diacylglycerol; monoacylglycerol; phospholipid; plycolipid; lysolipid; waxester; acylated carbohydrate; acylated amino acid; structured lipid; fat-soluble molecule; yeast; gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a nucleotide sequence (I) derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 5; SEQ

The nucleic acid molecule (I) and the polypeptide are useful in producing structured lipids or fat-soluble molecules, in removing undestrable fat or in modifying lipids present in animal and plant raw material. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1986 BP; 615 A; 361 C; 478 G; 532 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid molecule comprises a sequence encoding Stress-Related Protein (SRP), useful for producing transformed plants with altered metabolic activity resulting in increased tolerance or resistance
                                                                                                                                                                Local Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-AUG-2003;
30-SEP-2003;
                                                                                                                                                                                                                                                                                                                                                                              homologues are useful as markers for selection of plants or plant cells with increased tolerance to environmental stress, or for detection of stress in plants or plant cells. The nucleic acids are useful for producing transformed plants with altered metabolic activity resulting increased tolerance and/or resistance to an environmental stress (drought, heat, cold and salt) as compared to a corresponding nontransformed wild-type plant cell. The present sequence is a yeast gene encoding an SRP of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2004-766883/75.

RESULT 1 US-09-248-796A-1147

Patent No. 6747137

Sequence 1147, Application US/09248796A

```
GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND THERAPBUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPBUTICS
FILE REFERENCE: 107196.132
CURRENT FILING DATE: 1999-02-12
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR APPLICATION NUMBER: US 60/096,409
PRIOR APPLICATION NUMBER: US 60/096,4
